

AQUA FORCE

Soil Wetter

The Professional's Choice

Aquaforce is the wetting agent of choice for most of the large professional golf courses and playing fields throughout Western Australia. In Australia's toughest environment Aquaforce is used to overcome water repellency and to save water.

Moisture uptake and retention is enhanced around the root zone, improving plant health and vigour.

Aquaforce is environmentally friendly and can continue to work for up to 12 months.

DIRECTIONS FOR USE

Aquaforce should be applied to gardens and lawns before plant stress has occurred. Apply in Spring in the cool hours of the day. Best applied before sunset or during rainfall.

Application of Aquaforce will assist deep watering which means that watering will be required less frequently and water will be saved. Repeat application if required.

IMPORTANT

When area has been treated with Aquaforce, remove spray pack and continue to apply similar dose of water over entire area. This is important to wash in the wetting agent into the soil.

First Aid

If in eyes, irrigate for 15 minutes with water. See a doctor. If skin contact occurs, wash area well with water. If ingested drink lots of water and see a doctor. If poisoning occurs contact a doctor or Poisons Information Centre (Ph 13 11 26).

HAZARD & PRECAUTIONARY STATEMENTS

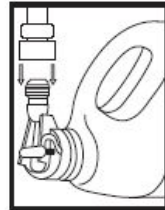

May cause an allergic reaction. Avoid breathing dust/fume/gas/mist/vapours/spray.

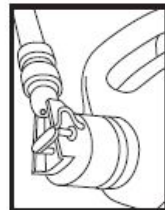

APPLICATION

1. Shake well before use.
2. Remove two pin plug from top of cap.
3. Attach to hose and turn on tap.
4. To engage Aquaforce, place forefinger or thumb over small hole on the side of the cap.
5. Aquaforce will begin to flow and will mix with the water in the correct proportion.

This container treats 200 square meters, so for smaller areas it will not be necessary to empty the container. When applying to garden beds, apply to the soil or mulch rather than over plant foliage. Contents will empty in 5 - 8 minutes depending on water flow rate.
