

# BI-AGRA

## SAVES WATER Can reduce irrigation required

Bi-Agra is new technology to assist utilization and conservation of water. Moisture uptake and retention is enhanced around the root zone, improving plant health and vigour. Bi-Agra is environmentally friendly and can continue to work for up to 12 months. Research has shown that application of Bi-Agra can retain up to 5 times the amount of water compared to untreated area which means that watering will be required less frequently and water will be saved.

### Directions for Use.

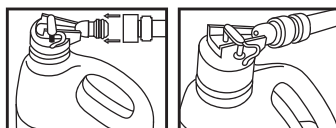

Bi-Agra should be applied to gardens and lawns before plant stress has occurred. Apply in the cool hours of the day. Water-in well to get BI-AGRA to the root zone. Repeat application if required.

### Application

#### Shake well before use.

Remove two pin plug from top of cap. Attach to hose and turn on tap. To engage Bi-Agra, place forefinger or thumb over small hole on the side of the cap. Bi-Agra will begin to flow and will mix with the water in the correct proportion. This container treats 150 square meters, so for smaller areas it will not be necessary to empty the container. When applying to garden beds, apply to the soil or mulch rather than over plant foliage. Contents will empty in 5 – 8 minutes depending on water flow rate.

**IMPORTANT.** When area has been treated with Bi-Agra, remove spray pack and continue to apply similar dose of water over entire area. This is important to wash Bi-Agra into the soil.
