

# No Apology Required

**We refuse to apologise for what the addition of Enhance<sup>®</sup> and Plantocrop<sup>®</sup> spray adjuvants to your herbicides is going to do to weeds.**

**Enhance<sup>®</sup>** is a premium spray oil concentrate/surfactant blend to improve the activity of a wide range of herbicides.

**Plantocrop<sup>®</sup>** is an esterified seed oil adjuvant with non-ionic surfactants designed to enhance the penetrating properties of in-crop and post-em herbicides, certain insecticides and desiccants.

Enhance<sup>®</sup> and Plantocrop<sup>®</sup> are the registered trademarks of DKSH Agrisolutions Pty Ltd.

## Product Details and Benefits

- **Enhance**<sup>®</sup> is suitable to be used with all products which state on their label that they are to be mixed with a crop oil or crop oil concentrate
- It is a premium grade paraffinic oil mixed with non-ionic surfactants, designed to improve the penetration, wetting and spreading properties of active ingredients it is mixed with. This aspect is particularly important for low volume applications
- **Enhance**<sup>®</sup> is not only recommended for use with herbicides but is also valued as an adjuvant for desiccants
- By covering the spray droplet with oil, **Enhance**<sup>®</sup> reduces droplet bounce, reduces evaporation, gives better surface contact between the active ingredient and the leaf, and droplet survival
- **Enhance**<sup>®</sup> is registered for use in Broadacre cropping including fallow, Cereals and Legumes, Horticulture, Sugarcane, Spot spraying and Aerial application
- Available in 20L, 110L and 1000L packs from all major agricultural Resellers

## Product Details and Benefits

- **Plantocrop**<sup>®</sup> is an esterified seed oil adjuvant with several non-ionic surfactants designed to enhance the penetrating properties of in-crop and post-emergent herbicides. It may be used whenever an esterified seed oil is recommended
- Manufactured from Australian-sourced food grade oil for superior crop safety, **Plantocrop**<sup>®</sup> gives something back to our canola growers
- Due to its high emulsion stability, it is particularly suited for mixing with active ingredients in cold water
- It provides improved weed control and cost effectiveness by increased penetration through the waxy leaf surface, reduced evaporation of the spray droplets before and after reaching the target surface, and improved spreading & sticking of the active ingredient
- **Plantocrop**<sup>®</sup> offers a high level of UV-stability for greater availability of the active ingredient mix partner
- Available in 20L, 110L and 1000L packs from all major agricultural Resellers
